

## Co-funded by the European Union

### Press release

May 11, 2026

**KMG International (Rompetrol) is implementing a new investment co-financed by European funds, aimed at developing the national network of electric charging stations for light and heavy vehicles.**

**KMG International (Rompetrol)**, through its member companies **Rompetrol Financial Group, Rompetrol Downstream, and KMG Rompetrol Development**, is implementing a new strategic project to develop electric charging infrastructure for both light-duty vehicles (LDV) and heavy-duty vehicles (HDV), across **26 locations in Romania.**

The project is **co-financed by the European Union** through the **Connecting Europe Facility (CEF) program**, contributing to the development of the Trans-European Transport Network (TEN-T) and to accelerating the transition towards low-emission mobility.

The initiative aims to install **ultra-fast charging stations**, adapted to current market requirements, including for heavy transport, thereby facilitating the electrification of logistics and commercial segments. The project supports the European Union's objectives of reducing greenhouse gas emissions and developing infrastructure for alternative fuels.

By implementing this initiative, the consortium comprising Rompetrol Financial Group, Rompetrol Downstream, and KMG Rompetrol Development reaffirms its commitment to developing modern infrastructure projects with a long-term impact on the energy and mobility markets in the region.

KMG International N.V.

“This project reflects the Group's strategic direction of developing electric mobility by implementing sustainable and relevant investments in the long term. The expansion of the charging network, including for heavy-duty vehicles, represents a strategic step towards consolidating integrated solutions, adapted to the requirements of the future”, said Alua Amirova, Director of Strategy and Sustainable Development at KMG International (Rompetrol).

“Developing electric charging infrastructure represents a natural step towards diversifying activities and adapting to developments in the mobility sector. In this way, we are expanding our service portfolio and strengthening the company’s position in the downstream segment, addressing both current market demands and its development directions. At the same time, we are integrating modern charging solutions for electric vehicles, including for the commercial segment, in line with industry transformations,” added Zhanibek Nugertayev, General Manager of Rompetrol Downstream.

The total estimated value of the project is approximately €8,200,000, of which **€2,010,000 will be granted by the European Union**. The project duration is 30 months, running from June 11, 2025, to December 11, 2027.
